

Are Magniwork and Magnets4Energy Promoting a Scam?

Are Magniwork and Magnets4Energy promoting a scam? Are Magnetic Motors a scam? Are Over Unity generators a scam? Are Zero Point Motors a scam? Are Perpetual Motion Machines a scam?

Allow me help you. If I were promoting perpetual motion, over unity and something-for-nothing, that would be a fraud. There is no way you can make something for nothing. You can collect or convert energy from an existing force, however. There is a part of the humankind population continually looking for something-for-nothing and when they find something that looks like something-for-nothing they jump on it. Because this population views this science as something-for-nothing it does not mean the science is claiming something-for-nothing.

Let me give you a few examples. A solar panel gathers energy for free. The source is the sun. The solar panel and sun will not do this forever. It is not perpetual. For your life span the solar panel is capable of "producing" (gathering) power for your entire life. Will it make a difference to you that it is not perpetual? Fascinating lesson on perspective.

When ancestors thought the planet was flat, it took a sailor trying to go around the planet to confirm it round. Subsequently that, perspective changed, not the truth. This happens all the time. Science does not change only the understanding.

Magnets opposite poles attract. Move a strong magnet towards another's opposite pole and they will pull together. What is the force that moved them? Is this force perpetual? Can this force be used over and over again to do work? Before we in the scientific world completely understand magnetism, we can make false claims about it because we do not have a option. We truthful don't know better. It's a mystery and it is human nature to apply rationale, even though the rationale can be incorrect. False claims ought not prevent us from using magnetism's force for work. Would not you agree?

Magniwork and Magnets4Energy are not selling perpetual motion in my opinion. They have implemented information or guides to build a scientific experiment in magnetism.

Search the Internet for these phrases: Zero Point Energy, Magnetic Zero Point Energy, Magnet Generator, Perpetual Motion Machine, and Over Unity Motors. You will discover all the associated material and know that this magnetic motor design has been around for over two decades. Since the implemented design will "produce" (gather) energy from a seemingly absent force, it looks like something-for-nothing; but is it really?

It is a challenge to believe a magnetic motor can produce its own power, yet search the Internet for its various key words and you will find hundreds of home-produced videos of experiments that exhibit a working motor / generator without applied power. Why do these function? Is it possible that you can convert magnetism into a power producing generator?

The working examples say yes.

What role magnetic motors will play in the future is uncertain but this we do know, an individual with curiosity and some handyman skills can build one and see for his or her self in less than a week. The two guides mentioned in this article are readily available for low cost and the materials will cost between \$100 - \$200.
